

## Basic Troubleshooting

### \*LED not displayed

Check the power source is correct voltage (DC5V) and correct polarity.

### \*Display appears scrambled

Check that all connections are correct and tight.  
Check that there is no harsh interference nearby.

### \*Display 4 or -4

Please confirm signal input is a loop when it is voltmeter;  
Please confirm inputting signal is not more than its measuring range.

### \*A/D chip maybe murdered

Reading data isn't Zero when shorting voltmeter signal inputting terminals.  
Reading data isn't Zero when ammeter signal inputting is off.
